Release Notes- 1.259

New Features:

Frequent Messaging and Exception Handling in General Settings

Frequent Messaging feature prevents users from sending the same message to the same number and channel within a set time interval. This functionality helps prevent accidental spamming. For instance, it is useful when an automation at the backend goes wrong and spams the client with the same messages without the Admin being aware of it.

This feature allows you to enable or disable Frequent Messaging in the SMS Setup: General Settings. Once enabled, you can set the time interval for Frequent Messaging.

Frequent Messaging 🥝	Disable
Frequent Messaging time: 🥝	15 mins

Fig: Frequent messaging and time

If this feature is enabled, and the same message is sent to the same number and channel within the specified time interval, an error message will appear on the screen, saying "Please select a different message" for a single transaction.

Fig: Error Message in Conversation View

Copyright [®] 2023 360 Degree Cloud – All Rights Reserved.

This document contains proprietary information. The contents may not be copied, duplicated, reproduced in any form, in whole or in part, electronically, manually or through AI writing tools, without prior written consent.

For Bulk Messaging, no error message is shown, but an SMS history is created with an error code (360035) and message (Duplicate Transcation).

Note that while the error message will be shown in the Conversation View, it will not be shown in bulk messaging.

Spin Text Feature: Send multiple Templates alternately

Now we have the ability to select multiple templates for bulk messaging in List View, SMS From Reports, and Campaigns. You can select multiple templates and when we send the message, it will be sent alternately using the selected templates. It will also reduce the chances of being marked as spam for that number.

For example- let's say you need to send bulk messages to 10 Contacts, and you send 3 templates via bulk message. It will send the templates 1, 2, and 3 in a sequential manner to the initial 3 Contacts, and then in the 4th contact, it will send

This document contains proprietary information. The contents may not be copied, duplicated, reproduced in any form, in whole or in part, electronically, manually or through AI writing tools, without prior written consent.

template 1 again, and then the cycle continues sequentially for the rest of the Contacts.

Channel Restriction

In SMS Setup: General Settings, there is now an option called 'Enable Channel Restriction for User Setup.' When this is enabled and you assign a number in the SMS Setup: User Config page, you can choose which channels the user can access using the 'Allowed Channels' field.

Only channels supported by the selected number will be displayed (as shown in the figure). If you choose only some channels, the user won't be able to use unselected channels and send cross-channel messages. The user will only see selected channels as active channels in the Conversation View: Channel list. Unselected channels will be visible as inactive and cannot be used. You can do this while assigning a new number or edit the existing number settings.

Introducing LINE Channel with Attachment Support via provider

We have introduced the LINE Channel with another provider. Previously, we offered this channel with another provider,, but it lacked support for attachments. With as our current provider, we can now support attachments up to 10 MB. As a result, we have added the LINE channel to our current provider,.

It is important to note that this feature is only supported for one-on-one messaging and is not available for bulk messaging.

Fig: LINE channel

Copyright $^{\otimes}$ 2023 360 Degree Cloud – All Rights Reserved.

"Invoke a Drip" Channel in Drip Campaigns

We are now supporting an additional channel in drip called 'Invoke a Drip'. This channel allows users to invoke another drip by selecting it from the Drip Campaign: Channel field, which displays a list of associated drips for the respective object.

For example, if we have a Drip Campaign set up for the Contact object and we want to execute another drip campaign for the same object, this functionality allows us to do so.

Note: Previously, we recommended that users add only 20 actions per drip, but now users can add as many drip actions as they desire without any limitations.

iText Supported in Conversation View

Previously, iText was not supported in the conversation view, but now it is supported (as shown in the figure):

Fig: iText Icon

Quick Replies and Call-to-Action Buttons are now available for Approved Templates and iText

Buttons in quick replies in SF. We supported it before too. Template created at provider end. We made only content in our SF. So if button in provider template, it wasnt there in our sf. So for the client end, quick reply was visible, but SF user didnt see it. For meta too, the client has to create

Can give quickly reply with an approved template. Usually approved. But it can be used for normal WhatsApp messages as well as session messages.

A quick reply is clicked by the user, and it comes as an incoming message.

When a template is approved for a button, it will appear as a button on the WhatsApp receiver's end. Previously, these buttons were not displayed on the conversation view SMS thread. However, we have now added two options: quick replies and Call to Action.

If the respective template body is approved for Quick Replies, then when you send the template, the SMS will include the Quick Replies button, which the user can create on the respective template. You can add up to three buttons in a Quick Reply. For Call to Action, you can add up to two buttons. This functionality will also work for iText.

In Templates: To create a new SMS template, you should first click on the SMS Template Object and then click on the 'New' button.

Initially, the notifications were sent through Salesforce Chatter. Now the app uses push notifications for Salesforce mobile app.

After clicking on 'New', you will enter the 'New Template' window, where you will need to provide the necessary details to create the new template. Additionally, you will see options under the 'Approved' button for 'Quick Replies' and 'Call to Action'.

This document contains proprietary information. The contents may not be copied, duplicated, reproduced in any form, in whole or in part, electronically, manually or through AI writing tools, without prior written consent.

Enhancements:

Synced Multi-Conversation View and Incoming SMS Alert for Message Read Status

Previously, if we read an incoming message in the Multi-Conversation View, that message would still be marked as unread in the Incoming Alert. We have now synchronized both components - the Multi-Conversation View and the Incoming Alert and have resolved this issue.

Restrict the 360 SMS app access to licensed users Only

We are restricting users who do not have a 360 SMS App's license. Let's say there are two users in an organization - User-1 and User-2 - and only User-1 has been assigned a license for the 360 SMS app. Previously, some components of 360 SMS App (for instance, Incoming Alert, SMS_Composing_Utility, etc.) were visible to both users. However, now User-2 will not have access to any 360 SMS App's components and will see a popup message that says, 'You do not have a license to access the 360 SMS app.' There is also a lightning button labeled 'Request for License' in the popup window. This button allows users to request a license. Once the user clicks this button, an email is automatically sent to the user who set up the 360 SMS App (displayed under SMS Setup- Org Config - "Last Setup done by:" requesting a license.

Enhanced Control Options for Emoji and Attachment Buttons

Previously, the option to enable or disable the Emoji and Attachment buttons on the conversation view was only available in the SMS Setup: General Settings: Enable/Disable/Hide Interface Element section. Now, this functionality has been extended to the Multi-Conversation and the Incoming Alert utility bars. Users are presented with three options: "Enable", "Disable", and "Hide". These options provide greater flexibility and control over the use of Emoji and Attachment buttons in conversations.

Enable Option: To enable the Emoji button and Attachement Button.

Disabe Option: In this, the emoji and attachment buttons are visible but disabled.

Hide Option: In this, the emoji and attachment buttons are not visible.

Group Chats Made Better: Increase in Participants from 5 to 10 Members

Previously, we only supported group chats with up to 5 members (5 recipients and 1 sender). Now, we have expanded our support to allow for up to 10 participants (To Number), in addition to the 1 sender member, to join a group chat.

Enhanced Voicemail System: Opt-Out Option and History Records

For now, compliance mechanism: contact opts out. We can't send the next message. Record-wise and channel-wise compliance, we can do channel-wise mech too. Only manually done channel-wise.

If the client opted out of SMS, then by default he opted out of voicemail. Not both channels opt out. Unsub records.

Whenever a Ringless Voicemail SMS History record is created, the voicemail information will be included in the History record channel if the channel contains the voicemail value. Additionally, we have also introduced a new channel for SMS unsubscribers called Voicemail. With this channel, you can now stop sending voice mail to selected customers.

iText: Default Status, Name Change, and Improved Folder Options

We have made some upgrades to iText:

- Previously, when creating a new iText, the status would default to "Inactive." However, now it will be set to "Active" by default.
- We have changed the display name from "Survey" to "iText."
- Previously, there was no option to "Add new" button to folders, but now "Add new" button is available in Folder field.

Expanded Query Limitations in iText

Previously, 10–50 queries were allowed for answers to one question. This has been increased to 120 answers for one question.

Previously, there were query limitations for 10–50 answer records in iText (surveys). However, we have now increased this limit to 120.

Custom Notification

Initially, the notifications were sent through Salesforce Chatter. Now the app uses push notifications for the Salesforce mobile app.

When an incoming message arrives, Salesforce's standard functionality displays notifications in the bell icon . We have introduced two options for custom
